KEY FINDINGS

Protecting public safety and ensuring the health and well-being of residents are essential functions of county governments. County governments own and operate a majority of all jails in the U.S. and spend $70 billion annually on the criminal justice system. Counties balance the pursuit of justice with the strategic management of the jail population and prudent county spending on the corrections system, including for the healthcare of the jail population.

The jail population has complex healthcare needs. Better management of the inmates with mental illnesses and chronic medical conditions may assist counties with reducing the number of people in jail that require medical and mental health treatment. This approach may also reduce costs and better provide for the healthcare needs of this population. An analysis of U.S. Department of Justice Bureau of Justice Statistics (BJS) data on the jail population and the results of a 2015 NACo survey of county jails finds:

1 A LARGE SHARE OF THE JAIL POPULATION HAS A MENTAL ILLNESS OR MEDICAL CONDITION. County jails have large jail populations with serious healthcare needs, including mental illnesses and medical conditions (See Key Terms). According to BJS, 40 percent of inmates have a chronic medical condition (See Figure 1). High blood pressure/hypertension is the most frequent medical condition in the jail population. Female jail inmates are more likely than male inmates to have a chronic medical condition and these conditions are more common among the persons in jail over 35 years. One-third of individuals who enter jail with a chronic medical condition were receiving medical treatment in the month prior to their admission to jail. A significant share of jail inmates with a chronic medical condition take prescription medication while in jail.

64% OF JAIL INMATES HAVE A MENTAL ILLNESS

40% OF INMATES IN JAIL IN 2011–2012 HAD A CHRONIC MEDICAL CONDITION

40% OF JAIL INMATES WITH A CHRONIC MEDICAL CONDITION TAKE PRESCRIPTION MEDICATION WHILE IN JAIL

Mental illness is a common occurrence within the jail population, and it is often coupled with substance abuse.

BJS reports that 64 percent of the jail population has a mental illness. According to a 2009 study, 15 percent of male jail inmates and 31 percent of female jail inmates have a serious mental illness, which includes depressive disorders, bipolar disorders, schizophrenia, delusional disorders and psychotic disorders. Co-occurring substance abuse is common among individuals with a mental illness. BJS data indicate that more than half of jail inmates with a mental illness used drugs or alcohol at the time of their crime.
KEY TERMS

**BEHAVIORAL HEALTH** is the mental and emotional circumstances and the choices and actions that affect well-being, including substance use and abuse, psychological distress and mental illness.⁸

**CHRONIC MEDICAL CONDITION** is a long-term physical health problem that can be controlled but not cured.⁹

**MEDICAID EXPANSION** under the Affordable Care Act extends Medicaid benefits to individuals under 65 years, including single adults without children, with incomes below 133 percent of the federal poverty level.

**MENTAL ILLNESS** is defined using the 2006 BJS definition of mental health problems, including having symptoms consistent with a mental illness based on criteria specified in the *Diagnostic and Statistical Manual of Mental Disorders* (⁴th edition) and/or receiving professional mental health treatment within the previous 12-months of confinement. The 2006 BJS study estimated the percent of the jail population with a mental health problem.¹⁰

**SERIOUS MENTAL ILLNESS** is defined using the 2009 Steadman and others definition of serious mental illness, including the presence of one or more of the following diagnoses: major depressive disorder; depressive disorder not otherwise specified; bipolar disorder I, II and not otherwise specified; schizophrenia spectrum disorder; schizoaffective disorder; schizophreniform disorder; brief psychotic disorder; delusional disorder and psychotic disorder not otherwise specified. Steadman and others estimated these diagnoses in the jail population.¹¹

**SUBSTANCE/DRUG ABUSE** is an addiction to an illegal or legal drug or medication that involves compulsive drug seeking behavior, risky drug use, increased tolerance to the amount consumed, social withdrawal, disregard for the consequences of using drugs and withdrawal symptoms.¹²

ADDRESSING THE MENTAL AND MEDICAL HEALTH NEEDS OF THE JAIL POPULATION IS A MAJOR CHALLENGE CONFRONTING COUNTY JAILS. Many of the challenges confronting county jails relate to addressing the mental health and medical needs of the jail population. A 2015 NACo survey of county jails found that addressing the mental health needs of inmates is the most common concern for county jails. Nearly three-quarters of respondent county jails prioritize ways to reduce the number of people with mental illnesses in jail and almost half face challenges in coordinating mental health treatment for inmates.

Inmate healthcare, medication and hospital stays are significant cost drivers for counties. Inmate healthcare expenses represent between nine and 30 percent of jail costs, with many counties covering costs through funds outside of the jail budget. County jails have a constitutional responsibility to provide inmates with adequate healthcare.

73% OF RESPONDENT COUNTY JAILS FOCUS ON REDUCING THE JAIL POPULATION WITH A MENTAL ILLNESS

28% OF RESPONDENT COUNTY JAILS SCREEN FOR MEDICAID ELIGIBILITY

FIGURE 2. MEDICAID ELIGIBILITY SCREENING AND ENROLLMENT IN COUNTY JAILS, MARCH–APRIL 2015

Source: NACo survey, March–April 2015.

Notes: As of March–April 2015, 30 states, including the District of Columbia, expanded Medicaid coverage under the Affordable Care Act, making health coverage available to individuals and families with incomes below 133 percent of the federal poverty level. The NACo survey of county jails asked if the booking process includes screening for Medicaid eligibility and if the jail provides Medicaid enrollment assistance to the pretrial population. Alaska, Connecticut, Hawaii and Rhode Island do not have county operated jails.
Medicaid and other forms of private or public insurance could help, but county jails cannot bill insurance providers or Medicaid for any health services provided in a jail facility. Medicaid’s inpatient exclusion allows for Medicaid reimbursement if an inmate is admitted as a patient to a hospital or medical facility for more than 24 hours. Most respondent jails (68 percent) to the 2015 NACo survey identify as part of the booking process whether individuals have health insurance, including private or government subsidized coverage. Recent research showed that most people who are in jail do not have insurance. More than one-quarter of respondent county jails to the NACo survey screen for Medicaid eligibility.

Medicaid enrollment helps beyond the jail, as it may also improve health outcomes for individuals released from jail by streamlining access to care in the community. County jails in states that expanded Medicaid are more likely to screen for eligibility and also provide assistance in Medicaid enrollment than county jails in states that did not expand Medicaid (See Figure 2). To learn more about the role of county jails in Medicaid enrollment, see the King County, Wash. and Cook County, Ill. case studies accompanying this report.

**A SMALL NUMBER OF COUNTY JAILS SUPERVISE JAIL INMATES OUTSIDE OF CONFINEMENT IN MENTAL HEALTH OR MEDICAL TREATMENT PROGRAMS.** County jails provide treatment to inmates within the jail as well outside the jail. Inmates with behavioral health or medical problems can receive treatment outside of confinement through community supervision programs run by county jails, but this is a limited occurrence.

Twenty-two (22) percent of respondent county jails indicated having a community based supervision program that provided behavioral health treatment outside of the jail, including for mental health, alcohol and/or drug use. Another 18 percent of county jails provide medical treatment, including for chronic medical conditions, outside of confinement through community based supervision programs. County jails with community based treatment programs are more likely to have both types available than only one. For example, among medium-sized counties, 19 percent of county jails have both treatment programs while seven percent have only a medical treatment or behavioral health treatment program available (See Figure 3). Most behavioral health and medical treatment programs are available to both pretrial and convicted jail populations. The majority programs, including both behavioral health and medical treatment, determine eligibility for participation by using a diverse set of criteria, including criminal history, the results of a health screening or assessment as well as the recommendation of a health professional.
Counties have a significant responsibility to provide healthcare to those in jail with mental illnesses and medical conditions. Without proper attention and care, medical conditions may worsen, putting individual and public health at a greater risk. Tackling behavioral health needs may reduce homelessness, unemployment and victimization among the jail population and prevent their cycling through the criminal justice system. For many county jails, connecting the jail population that has a medical condition or mental illness to the type of treatment they need is a pressing issue. To learn more about collaborative approaches and partnerships between health services and justice agencies, see the Montgomery County, Md, case study.

Collaboration between the county justice system, county health system and other community based organizations is essential to the success of treatment programs and for meeting the immediate and long term health needs of those with behavioral health or medical conditions who come into contact with the county jail. Counties strive to effectively provide the criminal justice population with greater access to healthcare and treatment. The delivery of care and service to this population can lead to greater individual well-being, reduce recidivism and improve public health.

Notes: Small counties have populations less than 50,000 residents. Medium-sized counties have populations between 50,000 and 500,000 residents. Large counties have more than 500,000 residents. Population size is based on 2014 population data from the U.S. Census Bureau’s Population Estimates Program. Alaska, Connecticut, Hawaii and Rhode Island do not have county operated jails.

ACKNOWLEDGMENTS

The author would like to thank the representatives of the county jails who responded to the 2015 NACo survey. I would also like to thank the American Jail Association, especially Robert Kasabian, for their assistance with distributing the survey and reviewing an earlier draft.

Within the National Association of Counties, the author extends gratitude to Matt Chase, Deborah Cox, Maeghan Gilmore, Emilia Istrate and Brian Namey for their thoughtful and helpful comments on an earlier draft. I also wish to thank Public Affairs for providing graphic design and producing the website of this report.

ABOUT NACo

The National Association of Counties (NACo) unites America’s 3,069 county governments. Founded in 1935, NACo brings county officials together to advocate with a collective voice on national policy, exchange ideas and build new leadership skills, pursue transformational county solutions, enrich the public’s understanding of county government, and exercise exemplary leadership in public service.

Collaboration between the county justice system, health providers and other community based organizations is essential to the success of treatment programs and for meeting the immediate and long term health needs of those with behavioral health or medical conditions who come into contact with the county jail.
