Antwaun Griffin, Deputy Assistant Secretary for Domestic Operations

Antwaun Griffin joined the International Trade Administration (ITA) in 2012 as Deputy Assistant Secretary for Domestic Operations.

Prior to joining the ITA, Antwaun served as the U.S. Small Business Administration’s (SBA) Senior Advisor for Field Operations from 2009 through 2011. In this position, he coordinated the development of policies, guidelines and operating procedures relating to the day-to-day management and operations of SBA’s 114 regional and district field offices around the country.

Antwaun has a strong understanding of the interagency, legislative and intergovernmental processes and served as the field offices’ chief point of contact for other federal agencies with economic development programs. In addition to developing and managing field staff training on new programs and policies, he also helped to develop a model for field leadership which is credited with maintaining the high value of service to SBA’s customers and local stakeholders during the past three years.

Antwaun developed the political, management, and strategic acumen required for this position through over a decade of experience in politics and field operational management. He's worked on or led numerous state and national efforts including service as the Georgia State Director for Obama for America, National Political Director for America Votes, Southern Political Director for Dodd for President, and a Campaign Manager for many local and state races.

Antwaun is a native of Richmond, Virginia and attended the University of Virginia where he was an Echol’s Scholar.
Establishing a New “Made In Rural America” Export and Investment Initiative

Today, the President directed his Administration, working through the White House Rural Council, to lead a new “Made in Rural America” export and investment initiative. This initiative is charged with bringing together federal resources to help rural businesses and leaders take advantage of new investment opportunities and access new customers and markets abroad.

Specifically, the President has instructed his Rural Council – in coordination with the U.S. Department of Agriculture, the U.S. Department of Commerce, the Small Business Administration, the Export-Import Bank, the Office of the United States Trade Representative, and other agencies – to commit to connecting more rural businesses of all types to export information and assistance through a comprehensive strategy including the following specific commitments, to be provided over the next nine months:

- **Host five “Made in Rural America” regional forums dedicated to promoting rural exports by providing rural leaders and businesses with information about federal and other resources available to help expand exports.** Working with local partners including the National Association of Counties (NACo), the Delta Regional Authority, and the Appalachian Regional Commission, these export-focused regional forums will help rural businesses take advantage of new market opportunities by providing training from experienced exporters and federal officials on the basics of exporting, accessing federal support, and participating in major trade events and trade shows across the country, as well as overseas trade missions.

- **Convene an “Investing in Rural America” conference later this year to connect major investors with rural business leaders, high-level government officials, economic development experts, and other partners.** This conference, hosted by the White House Rural Council in coordination with the Department of Agriculture and other partners, will promote opportunities to invest in Rural America by highlighting successful projects in energy; biofuels and bioproducts; infrastructure, from transportation to water systems to telecommunications; healthcare; manufacturing; and local and regional food systems.

- **Host training sessions to equip local USDA Rural Development staff in all 50 states plus territories with the tools they need to counsel businesses on export opportunities and resources.** The Department of Commerce, through the Trade Promotion Coordinating Committee, will cross-train USDA Rural Development staff so they can better deliver support or refer rural businesses to federal services.

- **Provide enhanced export counseling for rural businesses to connect with foreign buyers through the Department of Commerce’s U.S. Export Assistance Center trade specialists in over 100 domestic locations and in collaboration with the U.S. Department of Agriculture’s field staff.**

- **Coordinate across the Administration to promote rural-produced goods and services at trade events including trade missions, buyer programs, trade shows, and other promotion programs.**
- Educate local leaders across the country on the importance of rural exports in partnership with NACo and through the Trade Promotion Coordinating Committee in order to connect these leaders with federal resources and information to better support rural businesses to develop their potential for exporting.

- Use the BusinessUSA online platform to better connect rural businesses with export and investment resources and coordinate support from across the federal government. BusinessUSA was launched by the President last year to serve as a “one-stop-shop” that matches businesses and entrepreneurs to the full range of services and resources available to them at every stage of development.
## Why Export?

NATIONAL EXPORT INITIATIVE

[www.export.gov](http://www.export.gov)
Highlights of Recent Farm Sector and Rural Economy Performance

Rural communities and our nation’s agriculture sector embody the American value that hard work and dedication should be rewarded. Rural America contributes to economic growth, a strengthening Middle Class and building America’s competitiveness for the future.

The past five years represents one of the strongest periods in our Nation’s farm economy. Not only does American Agriculture put food on the table of American families at affordable prices and provide raw material for a range of vital purposes, it also supports one out of every twelve jobs in the economy. The hard work done on the farm is felt throughout our economy, particularly when agriculture is thriving.

The Farm Bill offers an opportunity to build on recent progress in the farm sector and rural economy noted below. The Farm Bill provides long-term certainty about the next five years of U.S. farm policy for America’s farmers, ranchers and producers. The Farm Bill also boosts trade and honors our commitments while helping our farmers and ranchers export a record amount of product around the world. The importance of the Farm Bill goes well beyond the role of agriculture, by providing technical assistance and financing for long-term investments in the future of rural communities. The Farm Bill also facilitates investments in local and regional food systems, and the development of economically-important local markets and food hubs.

Farm Sector Performance

• **Net farm income is forecast to be $131 billion in 2013.** After adjusting for inflation, 2013’s net farm income is up 46% percent from 2008 and is expected to be the highest since 1973.

![Net Farm Income, 1929-2013](chart.png)

Note: Data for 2013 are forecasts.
• Net cash income—which measures the difference between cash expenses and the combination of commodities sold during the calendar year plus other sources of farm income—is forecast at $129.7 billion, up 37% in real terms since 2008. 2013’s forecast would be the fourth time net cash income, after adjusting for inflation, has exceeded $100 billion since 1973.

• Almost all of this growth in U.S. agricultural output was due to increased productivity growth. All States contribute to agricultural production, which exceeded $444 billion in 2012. By 2011, total farm production was nearly 1.6 times larger than the value of production in 1948, and U.S. total agricultural output grew at an average annual rate of 1.49 percent over this period.

• Values of livestock and crops are rising. In 2013, the value of livestock production is expected to be 20% higher in 2013 than in 2008. The national value of crop production is expected to be nearly 17% higher in 2013 compared to 2008 levels.

• Median farm household income increased each year from 2008 to 2012. The increase largely reflects greater income from off-farm sources, where most farm households earn all of their income. In 2013, projected median total farm household income is expected to remain essentially unchanged, at $68,414.

![Median Farm Income, Median Off-Farm Income, & Median Total Income of Farm Operator Households, 2008-2012](image)

Note: Differences between 2012 estimates and estimates from prior years reflect changes in survey methodology and implementation associated with the 2012 Agricultural Resource Management Survey in addition to changes in the economic situation of farm households

• Michigan contributed over $9.3 billion to the Nation’s value of agricultural production in 2012, ranking 18th amongst the 50 States. After adjusting for inflation, the State’s value of production in 2012 is up more than 16% percent from 2008.
EMBARGOED UNTIL 6:00 AM FRIDAY FEBRUARY 7, 2014

- Most of the value of Michigan’s agricultural products are feed grains, milk and other dairy products and oilcrops. Michigan ranks 4th in value of sales for cut Christmas trees, 7th for fruits, trees nuts, and berries, and 6th for nursery, greenhouse, floriculture and sod.

- Increases in farm asset values are expected to continue to exceed increases in farm debt, leading to another new record high for farm equity in 2013. The most important factors affecting the value of U.S. farm sector assets, debt, and wealth (equity) in 2013 are net farm income and borrowing costs.

  - Farm asset values are expected to have risen 7 percent in 2013. The projected rise in farm sector assets in 2013 is due mainly to an expected 7.5-percent increase in the value of farm real estate. Farmland values are expected to continue rising, given the relative strength of commodity prices, accommodating interest rates, and expectations of continued favorable net returns both from the market and from government programs, including crop insurance.

- Confirming the strength of the farm sector’s solvency, both the debt-to-asset ratio and debt-to-equity ratio are expected to reach historic lows in 2013. The farm sector's debt-to-asset ratio is expected to continue its decline, falling from 10.7 percent at the end of 2012 to 10.3 percent by the end of 2013. The debt-to-equity ratio is expected to decline from 12.0 percent in 2012 to 11.5 percent in 2013.

  - With such historically low levels of debt relative to assets and equity, the sector is better insulated from the risks associated with commodity production. These risks include adverse weather, changing macroeconomic conditions in the U.S. and world economies, and any fluctuations in farm asset values that may occur due to changing demand for agricultural assets.
Partial-year data and USDA forecasts point to solid gains in the value of U.S. agricultural production in 2013. The value of crop, livestock, dairy, and poultry production are all expected to experience solid gains in 2013 as U.S. farm operations rebound from the 2012 drought.

- Increases in the value of corn for grain, hay, soybeans, poultry, eggs, and milk are leading the overall increase in production values. Crops particularly benefited from large production increases that, under historical marketing patterns, will likely go into storage for sale in 2014.
The value of livestock, dairy, and poultry receipts is expected to increase in 2013, reflecting especially large gains in broilers, milk, and hogs. Gains in broiler receipts reflect higher expected prices and increases in both domestic use and exports. Higher forecast milk receipts reflect an expected increase in production sold at considerably higher average prices. Higher forecast hog receipts reflect a predicted increase in domestic and export hog sales at a higher annual average price. Chicken egg receipts are expected to be up 8.8 percent in 2013 while turkey receipts are expected to decline 8.1 percent relative to 2012.

The Farm Bill provides assistance to farmers and ranchers, and specialty crop producers, when they need it most through improved access to crop insurance programs. Crop insurance is a critical risk mitigation tool for producers, particularly those facing drought. The new Farm Bill provides over $200 million to allow better crop insurance coverage for beginning farmers and ranchers by reducing their premiums during their first five years of farming. The Farm Bill also directs RMA to develop whole farm insurance products, which can help specialty crop growers better obtain insurance for their diverse operations.

American agriculture set a new record for exports in Calendar Year 2013, with a level of $144.1 billion. The agriculture sector and farm exports have been one of the brightest points for the U.S. economy. U.S. agricultural exports have out-paced U.S. agricultural imports since 1960, generating a surplus in U.S. agricultural trade. In 2012 agricultural exports supported nearly 1 million American jobs.
The period 2009-2013 stands as the strongest five-year period for agricultural exports in our nation's history with a total export value of more than $657 billion. Compared to the previous five-year period from 2004-2008, U.S. agricultural exports from 2009-2013 increased by a total of more than $205 billion in real terms. The value of bulk commodities exported has trended upwards at a 10 percent growth rate per year since 2005.

Provisions in the new Farm Bill boost trade while continuing commitments to developing markets at home and abroad will be key to maintaining strong farm incomes over the next 5 years. The Farm Bill authorized USDA’s efforts to boost trade, which are estimated to generate a return of $35 in economic benefits for every one dollar invested. These programs help approximately 70 U.S. agricultural producer organizations, each representing hundreds or thousands of producers, expand commercial export markets for their goods abroad.

- The Farm Bill also facilitates export financing of U.S. agricultural exports. This helped generate sales of more than $4.1 billion of U.S. agricultural exports in 2012 – including high-valued products like port, forest products, almonds, fish and fresh fruit.

### Investments in Rural Communities and Creating New Markets

- The U.S. has reached historic levels of investment in rural communities and infrastructure. The Obama Administration’s efforts have

  - Extended new or improved broadband service for more than 7 million Americans and 364,000 rural businesses.
o Improved or constructed more than 90,000 miles of electric line; invested in 6,700 water and wastewater projects for nearly 20 million Americans, creating or saving more than 150,000 jobs.

o Carried out more than 8,000 community facilities projects reaching nearly 31 million rural Americans.

o Helped more than 627,000 rural families to buy, refinance or repair a home.

o Provided grants and loans to assist nearly 60,000 rural small and mid-sized businesses in creating or saving more than 300,000 jobs.

• **The importance of the Farm Bill goes well beyond the role of agriculture.** The Farm Bill authorizes and directs the work of USDA-Rural Development, which provides technical assistance and financing for long-term investments in the future of rural communities. Among other forms of assistance, the Farm Bill:

  o Continues through 2018 the authorities for rural development programs essential for community economic development – including programs that finance investments in broadband, telecommunications, distance learning and telemedicine, entrepreneurship, and business development and growth.

  o Continues an emphasis on small business development, job creation, and growth.

  o Advances growth of local and regional food systems, including on-farm businesses.

  o Prioritizes and reserves 10% of funding in various programs for investments that are part of a long-term economic development strategy for a region, to ensure investments are strategic, focused, and crafted with maximum input from the local community.

• **To help producers take advantage of the multi-billion dollar marketing opportunity arising from increased demand for locally-produced foods, USDA has made historic investments to support these expanding markets.** Through Farm Bill-authorized programs, USDA supports the development of physical infrastructure, often in partnership with private lenders, and provides technical assistance or support to organizations engaged in marketing, food safety or production research and training, and other areas.

  o *Between 2009 and 2012, USDA supported over 2,600 projects nationwide to build new market opportunities in local and regional foods.* Farm Bill-authorized conservation, credit and risk management programs are supporting producers as they venture into these new markets. For example, since 2009, USDA has provided assistance to create more than 10,800 high tunnels – low-cost greenhouses that extend the growing season and conserve soil and water – on farms around the country through the Environmental Quality Incentives Program of the Natural Resources Conservation Service. A longer growing season allows farmers to provide their communities with fresh, local food later into the year.
- Increasing the number of farmers markets across the country. Through support of local and regional food systems, the Administration has helped increase the number of farmers markets nationwide, reaching 8,144 in 2013 – up from fewer than 5,000 in 2008.

**INVESTING IN THE NEXT GENERATION OF FARMERS**

- In 1982, 38 percent of farms were beginning farms and by 2011, 22 percent had an operator with 10 years or less of experience. Now, some of these farmers want to slow down or retire; but they have no one to take over their operation. That challenges us to find new ways to help transition farms to the next generation.

![Map of Farmers Market per 1,000 people, 2012](source: USDA)

![Bar chart of Distribution of Farms by Age of Principal Operator](source: USDA Agricultural Resource Management Survey (2011)).
• **Farm Bill programs have assisted beginning family farmers and invested in services that help already existing family farmers stay prosperous and stay on their land.** The new Farm Bill will place additional resources and emphasis on beginning farmers, specialty crop producers, such as those who grow fruits and vegetables. In addition, the new Farm Bill will place added emphasis on recruitment and support of U.S. veterans to begin successful farming and ranching operations.

  o *These programs have provided farm operating and ownership loans to help over 35,000 small and medium sized businesses.* USDA’s Beginning Farmer and Rancher Development Program has provided training and assistance to over 40,000 young and beginning farmers in 48 states. Through 2012, the Conservation Reserve Program, the Transition Incentive Program has provided more than 1,700 contracts which encourage exiting CRP enrollees to rent or sell their land to beginning farmers. These contracts allowed beginning farmers to farm over 275,000 acres of farm or ranch land in 26 states.

• **Helping veterans.** The Farm Bill being signed today provides additional preference and priority for U.S. veterans seeking assistance under USDA programs.

U.S. EXPORTS REACH $2.3 TRILLION IN 2013, SET NEW RECORD FOR FOURTH STRAIGHT YEAR

American Businesses Drive Record Exports to 63 Countries

WASHINGTON — U.S. Secretary of Commerce Penny Pritzker today announced that U.S. exports in 2013 set a new record for a fourth straight year. International Trade in U.S. Goods and Services data released today by the U.S. Department of Commerce show that U.S. exports reached $2.3 trillion in 2013, up nearly $700 billion since 2009. The U.S. trade deficit improved $63.1 billion from the past year to $471.5 billion, the lowest since 2009. Merchandise exports to the 20 economies that have trade agreements with the United States reached a record $732.0 billion.

U.S. goods export sectors reached all-time highs across the board in 2013, including key industries such as automotive, industrial supplies, consumer goods, capital goods, and petroleum. Imports of goods decreased for the first time since 2009.

The trade surplus in services exports reached a record $231.6 billion, an increase of 12 percent from 2012. Annual service exports hit all-time highs led by the travel and tourism sector. In addition, in 2013, the services sector accounted for more than one half of the dollar growth in total U.S. exports compared to 2012.

“We’ve achieved a fourth-consecutive year of record-breaking export levels, demonstrating the strong momentum behind President Obama’s export agenda,” said Secretary Pritzker. “The fact is, we live in a globally-connected world in which 95 percent of America’s consumers live outside our borders. American companies clearly understand the value of selling their goods and services all over the world, which not only helps them expand, but also grows our economy and creates good jobs. Every $1 billion in additional exports supports approximately 5,000 U.S. jobs, and as such, trade and investment are critical to the strength of our economy. That is why we at the Department of Commerce are laser-focused on helping create more opportunities for businesses to export.”
Since President Obama launched the National Export Initiative in 2010, an ambitious plan to sell more American goods and services into foreign markets, the United States has not only seen record exports but has seen an increase of 1.3 million export-related jobs. Expanding trade and investment is a top priority of the Department of Commerce and a key pillar of the Department’s “Open for Business Agenda.”

Strengthening relations with our trading partners is critical to continuing export and investment growth. Trade promotion and trade missions are some of the tools the Department is using to expand markets to U.S. goods and services and spurring investment in our economy. Secretary Pritzker is currently leading 17 U.S. companies on a business development mission in Mexico, the United States’ third-largest trading partner. In 2013, U.S. goods exports to Mexico reached a record $226.2 billion.

“The U.S.-Mexico bilateral relationship is among our closest and most extensive in the world,” said Secretary Pritzker. “Approximately $1.4 billion of merchandise trade and one million people cross our 2,000 mile shared border daily, and I believe there is incredible potential for our companies to do business together and for our countries to continue to deepen our economic relationship.”

Mexico is one of 11 Latin America markets targeted by the Department of Commerce’s new Look South Initiative – a federal government-wide effort to encourage U.S. companies to export to the region through enhanced trade promotion events. U.S. exports to Mexico and South and Central America are growing faster than our trade with the rest of the world.

###
FOR IMMEDIATE RELEASE
Tuesday, February 25, 2014

U.S. EXPORTS SUPPORT A RECORD 11.3 MILLION JOBS IN 2013

WASHINGTON – U.S. Secretary of Commerce Penny Pritzker today announced that U.S. exports supported more than 11.3 million jobs in 2013, up 1.6 million jobs since 2009. A U.S. Department of Commerce report issued today releases the 2013 jobs-supported-by-exports number and also highlights revisions to earlier projections for export-related jobs. The data in the report show that exports now support more jobs than any time in the past 20 years.

“The strong correlation between exports and U.S. jobs is why the Department of Commerce is focused on helping American companies sell their goods and services all over the globe,” said U.S. Secretary of Commerce Penny Pritzker. “The fact is, 95 percent of worldwide consumers live outside U.S. borders, and for our businesses to grow and create jobs, we have to make it possible for them to reach new markets. As an Administration, we are committed to setting the conditions that promote trade and investment, and ensuring that exports continue to drive local, state, and national economies and create jobs.”

In 2013, every $1 billion of U.S. exports supported nearly 5,600 jobs. Goods exports supported 7.1 million jobs in 2013, up 1.1 million positions from 2009. Services exports supported 4.2 million jobs in 2013, which is a record for the noted 20 year period.

In 2010, President Obama launched the National Export Initiative in 2010 to sell more American goods and services to foreign markets. Since its launch, the United States has experienced four consecutive years of record exports, including nearly $2.3 trillion in 2013. Expanding trade and investment is a top priority of the Department of Commerce and a key pillar of the Department’s “Open for Business Agenda.”

For more information on U.S. jobs supported by exports, please visit http://www.trade.gov/mas/ian/build/groups/public/%40tg_ian/documents/webcontent/tg_ian_005313.pdf.

###
