Notes:
- Structurally Deficient (SD): This term was previously defined in www.fhwa.dot.gov/bridge/0650dsup.cfm as having a condition rating of 4 or less for Item 58 (Deck), Item 59 (Superstructure), Item 60 (Substructure), or Item 62 (Culverts). OR having an appraisal rating of 2 or less for Item 67 (Structural Condition) or Item 71 (Waterway Adequacy). Effective Jan. 1, 2018, FHWA changed the definition of structurally deficient bridges. This term will be defined in accordance with the Pavement and Bridge Condition Performance Measures final rule, published in January 2017, as a classification given to a bridge which has any component elements — the deck, superstructure, substructure or culverts — rated in poor or worse condition (a rating code of 4 or less).
- Good (G), Fair (F), Poor (P): Bridge Condition is determined by the lowest rating of National Bridge Inventory (NBI) condition ratings for Item 58 (Deck), Item 59 (Superstructure), Item 60 (Substructure), or Item 62 (Culverts). If the lowest rating is greater than or equal to 7, the bridge is classified as Good. If it is less than or equal to 6, the classification is Poor. Bridges rated 5 or 6 are classified as Fair.

Notes:
- The county expenditure analysis is based on revised estimates published by the U.S. Census Bureau in September 2020.
- All analysis is based on 3,069 counties with active county governments. Thus, Connecticut, Rhode Island and portions of Alaska, Massachusetts are excluded since they do not have active county governments. Independent cities in Virginia are also excluded from the analysis.
- For the county bridge data, effective Jan. 1, 2018, the Federal Highway Administration changed the definition of structurally-deficient bridges which limits the classification to bridges where one of the key structural elements — the deck, superstructure, substructure or culverts — are rated in poor or worse condition.
