Drug Overdose Deaths Remain High

More than 932,000 people have died since 1999 from a drug overdose.[1] In 2020, 91,799 drug overdose deaths occurred in the United States. The age-adjusted rate of overdose deaths increased by 31% from 2019 (21.6 per 100,000) to 2020 (28.3 per 100,000).

- Opioids—mainly synthetic opioids (other than methadone)—are currently the main driver of drug overdose deaths. 82.3% of opioid-involved overdose deaths involved synthetic opioids.
- Opioids were involved in 68,630 overdose deaths in 2020 (74.8% of all drug overdose deaths).
- Drug overdose deaths involving psychostimulants such as methamphetamine are increasing with and without synthetic opioid involvement.[2]
